# Smartsheet for Enterprise: Making collaboration more efficient

Smartsheet is the best way to plan, track, automate, and report on work—**enabling you to move from idea to impact**—fast.

## Improved collaboration and accelerated progress

Too much time is spent on managing updates, creating reports, and chasing approvals. With **automated actions** you can **eliminate routine tasks** by setting up automated **updates** and **approval requests**—without writing code or complex formulas.

View and filter on all activities and changes made to a sheet in a single place with **Activity Log**. See who viewed your sheet, who it was shared with, and filter by user, dates, and action types.

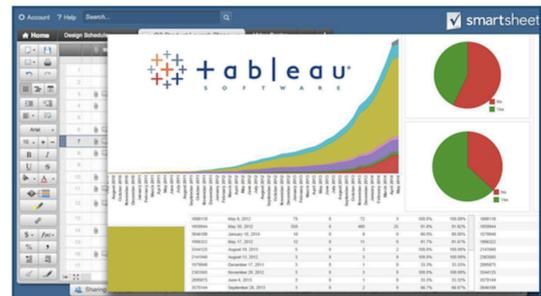

## Increased visibility and smarter decisions

**Smartsheet dashboards drive** visibility by keeping team members informed, engaged, and accountable. **They visualize multiple initiatives** at the highest level to see current status and progress on KPIs. This gives executives, managers, and collaborators new levels of clarity—so they can better allocate resources, anticipate gaps, and surface critical information.

## Visualizations for powerful data analyses

The **Live Data Connector** integrates with third-party analytic tools like Tableau or Power BI in real time—allowing you to **create visualizations** and **share charts and reports across the entire organization**. Pull data from multiple sources into one customized dashboard to deliver powerful analyses and insights.

## Powerful security and optimized for scale

Collaboration often takes place both inside and outside of the organization and includes **sensitive** or **confidential information**. Smartsheet has powerful administrative controls that scale and provide your company with the security and user management it needs.

Simplify the Smartsheet login process by using **single sign-on** (SSO) to manage teams of 100 or 100,000—with SAML 2 compliant identity providers. Enable **auto provisioning** to add licensed users to your plan within designated email domains—preventing users from setting up separate plans and sharing sensitive data.

Specify what types of files users can attach to rows, sheets, or reports and from what sources—including third-party cloud storage services **with file attachments**. Set up **whitelists** to restrict sharing by domains or specific emails—to include (or exclude) specific domains from vendors or partners.

## Priority support

Our world-class product support team provides continuous hands-on assistance for our Enterprise customers. Receive **priority support** to get fast answers when you need them most.

Gain access to a **dedicated Customer Success Manager** (CSM) who will provide personalized onboarding, proactive consulting, and coaching tailored for you and your team.

Over **70,000 brands**, millions of information workers across **190 countries**, and **50% of Fortune 500 companies** trust Smartsheet with their work.

To discuss which plans are right for you, contact your Smartsheet Partner or email **channel-partners@smartsheet.com**.
