

SmarterControls4Smartsheet – Smarter Column Naming

It's here! A way to rename columns across ALL your sheets within a wizard!

Our **Smarter Column Naming** feature within **SmarterControls4Smartsheet** is now available from SBP!

A truly *automagical* feature allowing naming conventions to be instilled across your organisation.

Do you have...?

- ? Multiple users creating your sheets?
- ? A naming convention that isn't being observed?
- ? The requirement for Multi-Sheet reporting?
- ? Inconsistent terminology being used?
- ? A headache when trying to find cross references?

How does Smarter Column Naming help with these issues?

Part of our **Front end Platform**, which sees **SmarterControls4Smartsheet** at the core, this feature provides an end user wizard which will perform a global Find and Replace on Column Names based on your Smartsheet Access Token.

This feature is designed to:

- Ensure naming conventions are consistent across all sheets within your organisation
- Make multi-sheet reports easier to create and analyse, as all column names will be consistent across all sheets
- Sheets will be easier to analyse due to the consistency of terminology
- Using this feature will save time but more importantly helps maintain corporate structure and uniformity which is a **MUST** for effective reporting and clear accurate dashboards.

Example scenario

You use Project sheets across your organisation and you have 3 Project Managers controlling the sheets; each one has their own name for the dates allocated to the tasks. One calls them **Start** and **End**; one calls them **Start Date** and **Finish Date** and the other calls them **From** and **To**. Multi-sheet reporting is hard to analyse due to the data being spread across 6 columns instead of 2. Management would like to see all task dates being called **Start Date** and **End Date**. **Smarter Column Naming** can search through ALL project sheets and rename all columns called **Start** or **From** with **Start Date** and rename all columns called **End**, **Finish Date** or **To** with **End Date**. Consistency in Column Naming achieved, multi-sheet reports better!
